Abstract. Elaboration of new earthworm materials collected from the continental and insular parts of Greece resulted in recording altogether 22 species and subspecies, of which three, namely *Pontodrilus litoralis* (Grube, 1855), *Ocnerodrilus occidentalis* Eisen, 1878 and *Dendrobaena pentheri* (Rosa, 1905) as senior synonym of *Dendrobaena aegea* (Cognetti, 1913) proved to be new to the fauna of Greece. Consequently, the number of the earthworm species recorded for Greece is raised to 59.

Keywords. Earthworms, faunistics, new records, Greece.

INTRODUCTION

The earthworm fauna of continental Greece is quite well-known. After Michaelsen (1902, 1914), several other scientists carried out researches here and published new data from the country (Tzelepis 1943, Omodeo 1955, Karaman 1972, Šapkarev 1972, Michalis 1975a, 1976, 1977, Zicsi 1973, 1974). Finally, Zicsi & Michalis (1981) summarized the knowledge on the lumbricid earthworms of Greece. After this comprehensive work, four new species and many new data were added to the earthworm fauna of Greece (Michalis 1982, 1983, 1987, 1995, Zicsi & Michalis 1993, Szederjesi & Csuzdi 2012).

The situation is just the opposite regarding the Greek islands, from where we have only sporadic data. Only five papers dealt with the insular earthworm fauna; Cognetti (1913) described two new species, *Perelia phoebea* and *Dendrobaena aegea* from Rhodes, and published new data from the island. Michaelsen (1928) described *Eisenia ariadne* from Naxos and recorded the presence of *Octodrilus complanatus* (Dugès, 1828) and *Lumbricus rubellus* Hoffmeister, 1843 from Lemnos. Cognetti (1906) and Černosvitov (1934) published new data from Crete and Michalis (1975b) from the island Kos.

Besides the 54 recorded earthworm species from the family Lumbricidae (Szederjesi & Csuzdi 2012), two species, namely *Microcolex dubius* (Fletcher, 1887) and *M. phosphoreus* Dugès, 1837 from the family Acanthodrilidae (Michalis 1975a, 1975b, 1987, Szederjesi & Csuzdi 2012) and two species, *Pheretima heterochaeta* (Michaelsen, 1891) and *Ph. peregina* v. *papillosa* (Tzelepis, 1943) from the family Megascolecidae (Michalis 1976, 1982) are also recorded from Greece. To our present knowledge, these two *Pheretima* species are synonyms of *Amyntas corticis* (Kinberg, 1867) (Csuzdi 2012).

In the last decade, researchers of the Hungarian Natural History Museum organized several collecting trips to Greece, including continental and insular regions too. This present paper summarizes the results of the collecting expeditions to the Pindus mountain range, Thrace, Rhodes, Karpathos, Crete, and Naxos between 2012 and 2014.

MATERIAL AND METHODS

Earthworms were collected by the diluted formaldehyde method (Raw 1959), complemented with digging and searching under stones and under the bark of fallen logs. The specimens were killed and fixed in 96% ethanol, then transferred

into 75% ethanol and deposited in the earthworm collection of the Hungarian Natural History Museum (HNHM). For later molecular studies, some specimens were placed into 96% ethanol.

RESULTS

Family Lumbricidae Rafinesque-Schmaltz, 1815

Aporrectodea caliginosa (Savigny, 1826)

Enterion caliginosum, Savigny 1826: 180.
Allolobophora caliginosa: Zicsi & Michalis 1981: 247., 1993: 302., Michalis 1982: 350., 1987: 61., 1995: 15.
Aporrectodea caliginosa: Szederjesi & Csuzdi 2012: 29.

Material examined. HNHM/16176 2 ex., South Aegean, Rhodes regional unit, Vati, roadside spring E of the village, 75 m, N36°03.225' E27°54.486', leg. J. Kotschán, D. Murányi, 08.11.2012. Dendrobaena pentheri (Rosa, 1905)

Allolobophora (Notogama) pentheri Rosa, 1905: 1.
Dendrobaena pentheri: Szederjesi et al. 2014: 560.
Helodrilus (Dendrobaena) aegeus: Cognetti 1913: 4.
Syn. nov.
Dendrobaena aegea: Zicsi & Michalis 1981: 260.

Material examined. HNHM/16179 1 ex., South Aegean, Rhodes regional unit, Prophitis Ilias, rocky cedar forest at the monastery, 605 m, N36°16.624' E27°56.543', leg. J. Konthschán, D. Murányi, 07.11.2012. HNHM/16181 3 ex., South Aegean, Rhodes regional unit, Aghios Nektarios, pine forest E of the monastery, 145 m, N36°15.943' E28°04.822', leg. J. Konthschán, D. Murányi, 14.11.2012. HNHM/16184 3 ex., South Aegean, Rhodes regional unit, Mt. Atavyros peak region, rocky grassland, 1095 m, N36°12.233' E27°51.913', leg. J. Konthschán, D. Murányi, 07.11.2012. HNHM/16186 1 ex., South Aegean, Karpathos regional unit, Lefkos, pine forest S of the village, 135 m, N35°35.730' E27°05.577', leg. J. Konthschán, D. Murányi, 12.11.2012.

Remarks. Cognetti (1913) described *Dendrobaena aegea* from Rhodes. According to the original description, this species is very similar to *D. pentheri*; the slight differences are in the position of the tubercles (29–31 vs. $\frac{1}{2}$ 28– $\frac{1}{2}$ 32) and the opening of the spermathecal pores (*d* vs. *d*–*M*).

Zicsi & Michalis (1981) also recorded *D. aegea* from Rhodes and mentioned that their specimens differ from the type material in the length of the tubercula pubertatis which is on $\frac{1}{2}$ 28– $\frac{1}{2}$ 32.

The *Dendrobaena aegea* specimens (HNHM/6449) reported by Zicsi & Michalis (1981) and two syntype specimens (HNHM/12675), and also *D. pentheri* specimens from Turkey (HNHM/16583, 16604) and Cyprus (HNHM/1 4664) were re-examined to clear this question.

All the examined specimens' tubercles show very similar extension, stretching from $1/n$ 28 to $1/n$ 32, the *D. aegea* syntypes examined have tubercles on 29– $\frac{1}{2}$ 32. The position of the spermathecal pores show geographic transition. The spermathecae of the specimens from Rhodes open in setal line *d*, from Turkey in setal line *d* or just above *d*, and from Cyprus the specimens has openings between *d* and the mid-dorsal line, or

near the mid-dorsal line. Besides, all specimens have tanylobic head.

Considering all these facts *D. aegea* is proposed as a synonym of *Dendrobaena pentheri* and in this sense *D. pentheri* is a new species name in the list of the earthworm fauna of Greece.

Material examined. HNHM AF/5566 1 ex., South Aegean, Naxos regional unit, Mt. Zas, Filoti, vicinity of Zas Cave, 680 m, N37°01.9' E25°29.8', leg. J. Kotschán, D. Murányi, T. Szederjesi, 07.04.2013.

Family Megascolecidae Rosa, 1891

Pontodrilus litoralis (Grube, 1855)

Lumbricus litoralis Grube, 1855: 127.

Pontodrilus litoralis: Blakemore 2007: 4.

Material examined. HNHM AF/5562 6 ex., Thrace, Evros peripheral unit, Dikelle, rocky seashore SE of the village, 0 m, N40°50.910' E25°42.440', leg. J. Kotschán, D. Murányi, T. Szederjesi, 27.05.2012.

Remarks. *Pontodrilus litoralis* is a cosmopolitan shoreline species, distributed from the

Mediterranean see-shores to India (Narayanan *et al.* 2014) the Caribbean (Csuzdi & Pavláček 2009) and the pacific regions (Blakemore 2007). This is the first record from Greece.

Family Ocnerodrilidae Beddard, 1891

Ocnerodrilus occidentalis Eisen, 1878

Ocnerodrilus occidentalis Eisen, 1878: 10., Blakemore 2008: 149.

Material examined. HNHM AF/5561 1 ex., South Aegean, Rhodes regional unit, Aghios Nektarios, pine forest E of the monastery, 145 m, N36°15.943' E28°04.822', leg. J. Kontschán, D. Murányi 14.11.2012.

Remark. This species is new to the fauna of Greece.

DISCUSSION

Out of the 22 earthworm species and subspecies found, three proved to be new to the fauna of Greece. *Dendrobaena pentheri* was described from Turkey (Rosa 1905). It has later been reported from Azerbaijan (as *Helodrilus (Eisenia) schemachaensis* Michaelsen, 1910) Georgia, Armenia (Kvavadze 1985) and, recently from Cyprus (Pavláček & Csuzdi 2006, Pavláček *et al.* 2010). Here we proved that *D. aegea* described from Rhodes is a synonym of *Dendrobaena pentheri* and in this sense *D. pentheri* is a new species name in the list of the earthworm species of Greece.

Pontodrilus litoralis is of uncertain origin (Blakemore 2007) and found all over the world on the shorelines of warmer oceans and seas. Our specimens were found in seashore debris on the Aegean coast.

The South American *Ocnerodrilus occidentalis* is widespread as well in tropical and Mediterranean regions, and can be found even in cooler climates, e.g. in Hungary in greenhouses (Csuzdi *et al.* 2007).

Together with these new records, the number of earthworm species recorded for Greece is 59.

Acknowledgements – My thanks are due to Dávid Murányi (HNHM Budapest) and Jenő Kontschán (PPI Budapest) for their kind assistance during the field work and collecting earthworms in Rhodes and Karpathos. This research was supported by a grant from OTKA (No. 100369).
